SKILLS

TECHNICAL

Server-Side / Cloud:

• AWS • GCP • Terraform

Tech Stacks:

• Spring Boot • gRPC • Node.js • React.js

• WebSockets • Docker • SQS • S3

Languages:

• Java • JavaScript

Databases:

• MongoDB • MySQL • SQL

Version Control:

• Git • GitHub

Application Observability:

• Dynatrace • Sentry

• Grafana/Prometheus

EDUCATION

TEC (AU)

MASTER OF COMPUTER

APPLICATIONS

Aug 2023 | Kanchipuram, TN

CGPA: 8.9 / 10

SCSVMV UNIVERSITY

BSC IN COMPUTER SCIENCE

May 2021 | Kanchipuram, TN

CGPA: 9.1 / 10

COURSEWORK

GRADUATE

Data Structures and Algorithms

Full Stack Development

Research Methodology

Cloud Computing and DevOps

Machine Learning

Cyber Security

EXPERIENCE

PAPERFLITE | SENIOR TECHNICAL SUPPORT ENGINEER (SRE)

Nov 2024 -- Present | Chennai, TN

- Manage server-side and backend operations for the live **Paperflite** platform, ensuring high availability, reliability, performance, and operational stability.
- Led the end-to-end migration of the production infrastructure from AWS to GCP within **one month**, enabling the organization to leverage **\$200K in GCP credits**; independently own and operate the complete GCP server-side infrastructure.
- Drive **SRE and KTLO initiatives** to improve application reliability, scalability, performance, and operational efficiency while optimizing infrastructure costs.
- Automated **GitHub Actions CI/CD pipelines** across multiple services, eliminating manual build and deployment overhead of **25–30 minutes** per cycle and enabling **2,500+ automated deployments** over the year.
- Integrated multiple **CRM and cloud-storage APIs**, improving data synchronization, system interoperability, and end-to-end platform workflows.
- Led the migration of major monolithic components to a **gRPC-based microservices architecture**, deploying and operating critical services in production.
- Diagnosed and resolved complex **application, server, database, and cloud infrastructure issues** with zero-downtime production support, while providing detailed root-cause analysis (RCA) and preventive remediation.
- Collaborated on application and database optimization initiatives, including codebase modernization, database collection migration, indexing, and query optimization, resulting in a **90% improvement in application performance**.

DOKONALY.COM | JUNIOR WEB DEVELOPER

Aug 2023 -- Nov 2024 | Chennai, TN

- Developed and maintained backend services for **Allmasters.ai**, including REST APIs, workflow logic, and authentication modules.
- Built a dedicated microservice to manage **50–70** automated task-scheduler jobs daily, improving reliability of automation workflows.
- Engineered OCR modules that increased fault tolerance by **98%**, enabling faster internal data processing.
- Optimized APIs using efficient logic and MongoDB aggregations, reducing response times from minutes to **50–150 ms**.

NULLCLASS | FULL STACK INTERN

Apr 2023 -- Jun 2023 | Chennai, TN

- Gained experience in development with industry-standard best practices.

PROJECTS

KNOWLEDGE GRAPH FOR CODEBASE

| Prodent

Built an AI-powered code intelligence system that ingests and maps GitHub repositories into a **knowledge graph (context lake)**, enabling semantic understanding of code, dependencies, business logic, and application flows. Designed the system to retrieve the **exact code paths and relevant implementation context** for a given issue or business query, significantly reducing the effort required to navigate and understand large codebases.
